2. https://github.com/fazildgr8/ros_autonomous_slam
3. Odometry <https://www.youtube.com/watch?v=z0259uerznA>

1. Using the reference [1] above, perform autonomous explorer using RRT algorithm
2. Explain what do you understand about RRT algorithm
3. Check the rqt graph of the simulation

1. Output the odometry of your robot as the robot move along the pathway while discovering the map.

1. Echo /odom to see the live data.
2. Write a C++ or Python code to log the odometry of your robot in .csv format. The log data format is as the following:

[illegible]
